[GENIE is the Infrastructure that Turns Local Ambition into Statewide Opportunity](#) [1]

On 08 Aug, 2025

[2]

Designed and deployed by Georgia Southern University with support from the U.S. Economic Development Administration, GENIE brings technology, mentorship, and programming directly into local spaces like chambers of commerce, development authorities, libraries, and co-working hubs.

Through GENIE, communities gain access to:

- A high-tech, configurable equipment setup at little to no installation cost
- A searchable database of advisors, content experts, and training courses
- A live and virtual calendar of workshops, networking events, and on-demand content
- Personalized support, technical assistance, and ongoing maintenance

More than just a system, GENIE is a long-term partner in economic development. It helps communities foster business growth, track measurable outcomes like job creation and new ventures, and seamlessly integrate into a broader innovation ecosystem across Georgia.
